Results of 2006 Latino Professional Survey Help Understand Latinos CHICAGO, June 14 / PRNewswire/ -- The Hispanic Alliance for Career Enhancement (HACE) today released the results of its 2006 Latino Professional Pulse Survey, during a conference call with the media from their headquarters in Chicago, Ill. The results of the survey "Making a Difference: Attitudes and Characteristics of Today's Latino Professionals," depict a population that is highly educated, fully bilingual, in almost all cases legally authorized to work, and with a family structure similar to the non-Hispanic white U.S. population. This survey also points to the fact that today's Latino professionals have a more optimistic outlook on the economy than the overall population. They also value more than money when seeking jobs, are compassionate, and give philanthropic support to their communities on an annual basis.

"With so much focus on the issue of immigration, many people are unaware that a significant number of college-educated Latinos are successfully working in professional positions and advancing in their careers," says Abe Tomas Hughes, HACE's President and CEO. "This is an upwardly mobile segment comprised of English-dominant individuals of Hispanic heritage that are, in practically all cases, citizens or legal residents authorized to work here. They represent model citizens of this country and offer a clear picture of how Latinos are increasingly contributing to the future of the U.S.," says Hughes. "Our results highlight that there are many layers and complexities to the Latino community in the U.S., beyond immigration. HACE is dedicated to help develop more Latino professionals in this country and committed to ensure that the image of Latinos reflects the great contributions we make on a daily basis," explained Hughes.

The survey found that 96% of Latino professionals are in the U.S. legally and are authorized to work. An overwhelming majority (86%) of the Latino professional respondents are U.S. citizens, while the remainder (10%) are U.S. permanent residents or "green card" holders.

One of the key discussion points regarding the U.S. Latino population has been the issue of assimilation. Contrary to the stereotypical images that have proliferated in some media outlets, Latino professionals have assimilated very well into the U.S. culture. Practically all (98%) of respondents are completely fluent in English and an additional (89%) are fully bilingual or with limited Spanish speaking and writing skills. Most (57%) have been in this country for one generation or more. This segment is well educated, with 80% having earned a bachelor's degree or higher compared to 13% for the overall Hispanic population and 28% for the non-Hispanic white population, while 97% have had some college coursework.

The jobs held by Latino professionals span a wide range of professions and include Fortune 1000 and privately held companies. However, a significant number of Latinos also choose to work in the public service sector. "Over the years we have seen that Latinos place a high value not only in advancing their careers but also in giving back to society," says Hughes. in non-profit, government, or academic professions. This compares to 18% for the overall Hispanic population and 25% for the non-Hispanic white population.

Another common thread that runs through this group is a spirit of optimism about the economy and a desire to advance in their careers. Over the past three years of Latino Professional Pulse surveys, the optimism Latinos have about the economy has been increasing. Currently 56% feel that business conditions and the economy are rising.

When asked about the key motivators for their job decisions, surprisingly only 19% of the respondents listed money as the leading factor. The top motivator influencing job decisions was access to opportunity and growth in their careers (28%). The desire to improve and move up in their careers is a strong value held by the Latino professional.

The HACE Latino Professional Pulse is an annual Web-based survey of over 20,000 Latino professionals within the HACE national database. This survey was conducted through two email questionnaires where a total of 887 opened the survey with 511 fully completing it, for a total response ratio of 2.4% of the total database, or 57.6% of viewers of the survey. The respondents reflect the general composition of the Latino professional population in gender, age and ethnicity throughout the country.

HACE is a 24-year-old national nonprofit organization whose sole mission is to nurture Latino professionals at all stages of their careers, from high school to college and on to the professional years. As one of the largest networks of Latino professionals in the country, HACE is supported by a team of full-time staff as well as volunteers from the business community. HACE offers comprehensive year-round programs that provide training, mentoring, and networking opportunities for Hispanic professionals on a regional and national level.
